SUMMARY

Frontend Engineer with 5 years of experience building consumer-scale fintech products and enterprise SaaS applications at Paytm Payments Bank, Paytm, and ServiceNow. Delivered secure UPI, credit-card, EMI, workflow-automation, and AI-assisted user experiences used by large customer bases. Strong in React.js, TypeScript, Vue.js, reusable component architecture, REST API integration, frontend security, performance optimization, and automated testing. Experienced in working with RAG-enabled enterprise experiences, AI Search, LLM-powered workflows, MCP-based developer tooling, Claude Code, and GitHub Copilot. Proven record of improving transaction adoption, data completeness, platform maintainability, and engineering delivery speed.

EXPERIENCE

Software Engineer 2

ServiceNow

Sep 2024 – Present

Hyderabad, India

- **Enterprise Workflow Automation:** Developed customer-facing workflow applications using JavaScript and ServiceNow UI Builder, simplifying approval journeys and reducing approval turnaround time by **40%**.
- **AI-Assisted Workflow Experiences:** Integrated AI Search and AI-assisted discovery capabilities into workflow interfaces, helping users locate relevant enterprise information and complete approval tasks with fewer manual steps.
- **RAG-Enabled Product Usage:** Worked with RAG-backed enterprise search and generative-AI experiences within ServiceNow, evaluating generated responses, validating source relevance, and incorporating AI outputs into user-facing workflows.
- **Customer Data Integration:** Built the frontend integration layer between workflow applications and user-management REST APIs, resolving real-time synchronization gaps and improving customer-data completeness by **80%**.
- **Cross-System Orchestration:** Delivered UI-facing integrations across enterprise applications using REST APIs, Integration Hub, Flow Designer, and asynchronous workflows, improving visibility and usability across order-processing journeys.
- **Platform Migration Ownership:** Led the frontend migration of customer-facing capabilities across ServiceNow environments, preserving feature parity, user access, integrations, and production availability throughout the transition.
- **Reusable UI Architecture:** Created configurable UI Builder components and shared frontend patterns for form-heavy enterprise workflows, reducing duplicated implementation and improving consistency across product surfaces.
- **AI-Accelerated Engineering:** Use Claude, Claude Code, GitHub Copilot, and MCP-based developer tools for codebase exploration, implementation planning, component scaffolding, code review, debugging, and test generation while maintaining engineering and coverage standards.

Software Engineer — React.js

Paytm Payments Bank

Oct 2022 – Aug 2024

Noida, India

- **Consumer Payments Platform:** Led frontend development for UPI Settings, RuPay Credit Card Linking, and EMI transaction journeys used by **millions of monthly active users**, contributing to an **80% increase in transaction volume**.
- **End-to-End Feature Delivery:** Owned requirements analysis, component design, API integration, state management, validation, testing, release coordination, and post-production monitoring for critical payment workflows.
- **International UPI Activation:** Delivered a multilingual UPI activation experience and integrated 3 external APIs, enabling international users to onboard and access supported payment capabilities.
- **Authentication and Session Security:** Designed reusable authentication flows with secure token handling, session and cookie controls, input sanitization, validation, and defensive error handling across banking and credit-card journeys.
- **Reusable Component Platform:** Built **15+ reusable React components** with **90%+ test coverage**, adopted across 4 payment workflows and reducing feature delivery time by **25%**.
- **Performance and Reliability:** Applied memoization, lazy loading, code splitting, render optimization, and resilient API-state handling to improve responsiveness across form-heavy payment experiences.

- **Cross-Functional Delivery:** Collaborated with backend engineers, designers, product managers, QA, security, and compliance teams to safely ship regulated banking features.

Software Development Engineer — Vue.js

Aug 2021 – Sep 2022

Paytm

Bangalore, India

- Owned frontend feature development for Paytm's health-insurance web platform using Vue.js, JavaScript, REST APIs, reusable components, and responsive web design.
- Refactored core Vue.js modules and shared UI components, reducing codebase size by **55%** and resolving **185+ code-quality issues**.
- Improved maintainability and rendering performance by eliminating duplicated logic, simplifying component responsibilities, and optimizing application state and UI updates.
- Worked with product, design, backend, and QA teams to deliver customer-facing insurance journeys from development through production release.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Java, SQL, HTML5, CSS3, Python, C/C++
- **Frontend:** React.js, Redux, Next.js, Vue.js, React Hook Form, component architecture, responsive design
- **Testing:** Jest, unit testing, component testing, test-driven development, code-quality validation
- **Performance:** React.memo, useMemo, useCallback, code splitting, lazy loading, bundle optimization, re-render minimization
- **API and Integration:** REST APIs, asynchronous workflows, third-party integrations, error handling, API-state management
- **Security:** Authentication flows, auth-token handling, session and cookie security, input sanitization, frontend validation
- **AI and Developer Tooling:** RAG-enabled applications, AI Search, LLM prompting, MCP, Claude, Claude Code, GitHub Copilot, Devin
- **ServiceNow Platform:** UI Builder, AI Search, Generative AI, Agentic AI, Integration Hub, Flow Designer
- **Backend and Engineering Tools:** Node.js, Git, CI/CD, Agile/Scrum

PROJECTS

- **AI-Powered Technical-Debt Analyzer — ServiceNow Platform:** Built an LLM-assisted analysis tool that scans enterprise platform metadata and scripts, identifies customization patterns, and recommends standard-platform alternatives to accelerate migration assessments. Tech: JavaScript, ServiceNow Platform APIs, metadata analysis, LLM prompting.
- **AI-Powered Incident Summarization Tool — ServiceNow + LLMs:** Developed a generative-AI workflow that summarizes incident records, highlights relevant context, suggests probable root causes, and generates troubleshooting recommendations from structured records and logs. Tech: JavaScript, REST APIs, ServiceNow Generative AI, prompt engineering.
- **MCP-Assisted Development Workflows:** Used Model Context Protocol integrations with AI coding tools to retrieve relevant codebase and documentation context, improve implementation planning, and reduce manual context switching during development.

ACHIEVEMENTS

- **Flipkart Girls Wanna Code Achiever** — 2021
- **3rd Place, StackHack 1.0 — HackerEarth** — 2021

EDUCATION

Banasthali Vidyapith

Jaipur, Rajasthan, India

B.Tech, Information Technology — CGPA: 8.35/10

2017 – 2021
